Feature Management And Azure AppConfiguration

https://github.com/kdcllc/FeatureManagementWorkshop

Enable AppConfigurations

Add the following to `IHost`

```csharp
return Host.CreateDefaultBuilder(args)
                .UseAzureAppConfiguration(
                (connect, config) =>
                {
                    config.Bind("AppConfig", connect);
                },
                (interval, config) =>
                {
                    interval.RefreshInterval = config.GetValue<TimeSpan>("AppConfig:RefreshInterval");
                });
```
